

Rosebrook Automatic 3 Axis Hydraulic Profiler Model 6000

The high pressure, high flow, 3D automatic profile control

20 years of progressive research, pioneering and development have resulted in the Rosebrook Automatic, the most advanced hydraulic profiler on the market today.

The automatic senses a 360° pattern, in any x, y axis and will trace angles up to 25° on the z axis. It operates at higher flow and pressure rates than any other automatic profiler. Operation is smooth and accurate at pressures from 150 to 1,000 psi and there is no chatter, binding or sticking at any feed rate.
